

LONDON TRANSPORT CRIME ANALYSIS

Executive Summary

Victoria Johnson | Tableau · Excel | FY2009/10 – FY2023/24

Total Crimes
904,790
Transport Modes: 9

OBJECTIVE

Analyze crime trends across 9 London transport modes using Tableau to identify high-risk systems, seasonal patterns, and operational priorities for TfL management.

KEY METRICS

Total Crimes	Time Period	Highest Crime Mode	Peak Months
904,790	FY2009/10 - FY2023/24	Bus (270,107)	Oct - Nov

KEY FINDINGS

Crime Distribution

- Bus recorded the highest total number of reported crimes at 270,107 incidents.
- London Underground recorded a higher average rate value than the other transport modes in the dataset.
- The five highest-volume transport modes accounted for the large majority of reported incidents.
- DLR, Trams, and Elizabeth Line recorded considerably lower crime volumes than the major transport modes.

Trend & Seasonality

- Crime rose 134% over 15 years: from 40,570 (FY2009/10) to 95,036 (FY2023/24)
- FY2020/21 recorded a sharp decline to 37,866 during the COVID-19 pandemic and associated travel restrictions.
- Reported crime exceeded the pre-pandemic level by FY2023/24, reaching 95,036 incidents.
- November is the highest crime month at 83,988 incidents
- Top 5 peak months are Nov, Mar, Oct, Dec, Jan

RECOMMENDATIONS

- Prioritize further analysis of London Underground because it recorded the highest average rate value among the transport modes in the dataset.
- Review high-volume bus routes and locations to identify where additional patrol or security resources may have the greatest impact.
- Use the higher incident volumes observed in November and other high-volume months to support seasonal resource planning.
- Compare transport modes using both reported crime volume and the available rate measure rather than total incidents alone.
- Review the increase in reported incidents through FY2023/24 and monitor later periods to determine whether the upward pattern continues.
- Update the Tableau dashboards as new TfL data becomes available to support ongoing trend monitoring.
