

Global Superstore Profit Performance Review

A business intelligence project that analyzes sales, profit, discounts, customers, and operational performance to identify where profit is generated, where it is lost, and what actions management can take to improve profitability.

Built using Power BI, DAX, and Power Query.

Business Problem

Global Superstore is profitable overall, but management lacks visibility into which products, regions, pricing decisions, and customer segments drive profit or create losses.

This project answers four key business questions:

- Where is profit generated?
- Where is profit leaking?
- Are discounts improving profitability or reducing it?
- Which customers and operational factors contribute most to profit?

Executive Summary

The business generated \$12.64M in sales and \$1.47M in net profit, resulting in an overall profit margin of 11.61%.

Although the company is profitable, nearly 30% of orders generate losses. Most of those losses are concentrated in Furniture, particularly the Tables sub-category, while Technology remains the strongest profit contributor.

The analysis also shows that profitability decreases as discounts increase. Orders discounted above 30% consistently lose money, suggesting that the current discount strategy is reducing overall profit instead of driving sustainable growth.

From a customer perspective, the Consumer segment contributes the highest profit, while Standard Class shipping delivers the strongest operational performance.

Key Findings

Profit Performance

- Total Sales: \$12.64M
- Net Profit: \$1.47M
- Profit Margin: 11.61%
- Technology generated the highest profit (\$664K)
- Tables recorded the largest loss (-\$64K)

Profit Leakage

- Around 30% of orders generated negative profit
- Unprofitable orders resulted in approximately \$921K in losses
- Furniture accounted for about \$370K of total losses
- The Central region recorded the highest regional losses

Discount Analysis

- Average discount: 14.3%
- Orders with discounts above 30% produced negative profit margins
- Higher discounts consistently reduced profitability
- Furniture received the largest average discounts

Customer & Operations

- Consumer was the highest-profit customer segment
- Standard Class shipping generated the highest profit
- Average Order Value: \$505
- Average delivery time: 4 days

Recommendations

- Review pricing for the Tables sub-category.
- Reduce excessive discounting, especially discounts above 20%.
- Require approval before applying discounts above 30%.
- Investigate the causes of losses in the Central region.
- Focus retention efforts on high-value Consumer customers.
- Continue prioritizing Standard Class shipping.

Dashboard Overview

Executive Overview

Provides a high-level view of sales, profit, profit margin, monthly trends, and transport mode performance.

Profit Leakage Analysis

Identifies where losses occur across products, categories, and regions.

Discount Performance

Evaluates how different discount levels affect profitability.

Customer & Operations

Examines customer segments, shipping methods, and operational performance.

Skills Demonstrated

- Business Analysis
- Data Cleaning with Power Query
- Data Modeling
- DAX Measures
- KPI Development
- Executive Dashboard Design
- Data Storytelling
- Business Recommendation Development

Tools Used

- Power BI
- Power Query
- DAX
- Excel
